Digit Recognizer API 1.0.0 OAS 3.1

/openapi.json

Predicts handwritten digits (0–9) from 28×28 pixel arrays. Built with a NumPy MLP — no ML framework required.

default

GET / Health Check

Returns service status. Used by Nginx upstream health checks.

Parameters Try it out

No parameters

Responses

200	Successful Response Media type application/json	*No links*

Code	Description	Links
	Controls `Accept` header. **Example Value** | Schema `"string"`	

POST `/predict` Predict

Predict the digit in a 28x28 greyscale image.

- **pixels**: List of 784 floats, each normalized to [0.0, 1.0]
- Returns: predicted digit, confidence score, full probability distribution, and inference latency in milliseconds.
